

Kee Safety Case Study

Martin Bunn - March 2013

Kee Access – McCarthy Properties

Kee Access DDA Handrails with Wooden
Effect Handrail and Glass Infill Panels

Kee Access – McCarthy Properties

- McCarthy Properties was established in 1989 by entrepreneur, property investor and landlord Richard McCarthy to provide his personally owned, quality rental accommodation in Reading directly to tenants without the unnecessary complications and expense of using a letting agent.
- Richard McCarthy approached Kee Safety in 2012 to look at creating a solution for a balustrade handrail at his own property which is set in a quiet location in Berkshire.
- Richard created his own design for his tropical garden which comprises of a swimming pool, gym, hot-tub with palm trees in the garden

Kee Access – McCarthy Properties

- In order for Kee Safety to Supply and Install a balustrade / handrail system that was in keeping with the modern style Richard has created, Kee Safety advised that the Kee Access system with a wooden powder coated effect handrail with glass infill panels would finish off the slick looking Swimming Pool and Gym area.
- The system comprised of Kee Access handrails which were powder coated with a wooden effect then infill with 10mm toughen tinted glass.
- The value of the project as £13,000.00
